

What is claimed is:

1. A data communication apparatus comprising:
an inputter arranged to input file data;
5 a setter arranged to set a subject of an
electronic mail to be transmitted;
a producer arranged to produce a file name of the
file data input by said inputter based on the subject
set by said setter; and
10 a transmitter arranged to transmit electronic mail
data including the file data input by said inputter,
the subject set by said setter, and the file name
produced by said producer.
2. A data communication apparatus according to
15 claim 1, wherein said inputter inputs the file data
obtained by reading an image on an original.
3. A data communication apparatus according to
claim 1, wherein said inputter inputs the file data
obtained from a detachable memory.
- 20 4. A data communication apparatus according to
claim 1, wherein said producer produces the file name
based on a number of the file data input by said
inputter and the subject set by said setter.
- 25 5. A data communication apparatus according to
claim 1, wherein said producer produces the file name
in accordance with a kind of the file data input by
said inputter.

6. A method of producing electronic mail data to be transmitted, comprising the steps of:

inputting file data;

setting a subject of an electronic mail to be

5 transmitted; and

producing a file name of the file data input in said inputting step based on the subject set in said setting step.

7. A computer readable program stored in a
10 storage medium, comprising:

an inputting module for inputting file data;

a setting module for setting a subject of an electronic mail to be transmitted; and

a producing module for producing a file name of
15 the file data input by said inputting module based on the subject set by said setting module.
